

# Download Hurricane Manuel Doppler

Hurricane Manuel was the most destructive eastern Pacific tropical cyclone on record. Manuel brought widespread flooding across much of Mexico in September 2013, along with Hurricane Ingrid, which hit the opposite side of the nation the same day as Manuel, the first such occurrence since 1958. The fifteenth named storm and seventh hurricane of the annual hurricane season, Manuel originated from a strong area of low pressure south of Acapulco on September 13. Within favorable conditions aloft, thManuel made a second landfall the next day as a Category 1 hurricane. Dozens of people were killed by Manuel in Mexico due to the flooding and mudslides it caused. Long lines form in stores as Hawaiians stock up on supplies before Hurricane Lane. Residents are swarming grocery stores and gas stations in preparations for Hurricane Lane's arrival. With sustained wind of 155 miles per hour, Hurricane Lane is expected to impact the entire chain of islands starting Thursday, through the weekend. The governor has declared a state of emergency as Lane continues its path toward the islands. National Hurricane Center Home Page.
