Dear Dinesh, You can refer the tutorial of suction pile (hollow circular section, page 47, 2015) in tutorial manual of the PLAXIS 3D. Here just see, if you can make it solid instead of hollow, and then extrude the section for desired thickness of the pile cap. Also, you can model circular cap by importing solid circular section to the PLAXIS 3D. layers and the water table is given. If multiple boreholes are defined, PLAXIS 3D will automatically interpolate between the boreholes, and derive the position of the soil layers from the borehole information. Hint: PLAXIS 3D can also deal with layers that are discontinuous, i.e. only locally present in the model area.
