

Download Rss Feedl

RSS (Rich Site Summary; originally RDF Site Summary; often called Really Simple Syndication) is a type of web feed which allows users to access updates to online content in a standardized, computer-readable format. These feeds can, for example, allow a user to keep track of many different websites in a single news aggregator. RSS Feed Readers and News Aggregators Feed Reader or News Aggregator software allow you to grab the RSS feeds from various sites and display them for you to read and use. A variety of RSS Readers are available for different platforms. RSS feeds benefit those who actually own or publish a website as well since site owners can get their updated content to subscribers much more quickly by submitting feeds to various XML and RSS directories. RSS (really simple syndication) service is a means by which CNN.com offers feeds of story headlines in XML format ("RSS Content") to visitors to CNN.com (the "CNN Site") who use RSS aggregators.
