

# Download The Infertile Male The Clinicians Guide To Diagnosis And Treatment

Approximately 15% of couples are unable to conceive after one year of unprotected intercourse. A male factor is solely responsible in about 20% of infertile couples and contributory in another 30-40%. The mission of Urology, the "GOLD JOURNAL", is to provide practical, timely, and relevant clinical and basic science information to physicians and researchers practicing the art of urology worldwide. Urology publishes original articles relating to adult and pediatric clinical urology as well as to clinical and basic science research. Topics in Urology include pediatrics, surgical oncology ...

**INTRODUCTION** — An infertility evaluation is usually initiated after one year of regular unprotected intercourse in women under age 35 years and after six months of unprotected intercourse in women age 35 years and older. However, the evaluation may be initiated sooner in women with irregular menstrual cycles or known risk factors for infertility, such as endometriosis, a history of pelvic ...

**Guidelines on the diagnosis and treatment of male hypogonadism**, with the aim to provide practical recommendations on how to deal with primary and secondary forms of hypogonadism, ageing-related decline in testosterone in men, as well as the treatment of testosterone deficiencies.
