

Download Who Recommendations For Augmentation Of Labour

The WHO Reproductive Health Library (RHL) is a curated collection of high-quality evidence in reproductive health, published by the World Health Organization. Childbirth, also known as labour and delivery, is the ending of a pregnancy by one or more babies leaving a woman's uterus by vaginal passage or Caesarean section. In 2015, there were about 135 million births globally. About 15 million were born before 37 weeks of gestation, while between 3 and 12% were born after 42 weeks. In the developed world most deliveries occur in hospitals, while in ... Overview. In 2003 WHO published "Working with individuals, families and communities to improve maternal and newborn health", known as the IFC Framework, that promotes integrating the health promotion approach set out in the Ottawa Charter into national maternal and newborn health strategies. More than 10 years after the original framework was published, we have updated the evidence for key ... During normal labor, regular and painful uterine contractions cause progressive dilation and effacement of the cervix, accompanied by descent and eventual expulsion of the fetus. "Abnormal labor," "dystocia," and "failure to progress" are traditional but imprecise terms that have been used to ...
